

Endgame Flashcards

If you want to become really good at endgame in Go, you need to learn to quickly estimate the value of a given move. Endgame flashcards will help you with this.

What to do with these flashcards?

Black's turn. Look at each diagram and determine what kind of move it is (gote, sente, reverse sente or double sente) and how much it's worth.

How to use them?

You can use these cards just like the ones for learning foreign languages: mix them up, draw one and try to calculate the value quickly. You can also stick them around the house to help you gradually memorize these positions. Alternatively you can play all sorts of games using these flashcards: team games of guessing the value fast, memo (picking cards with equal value) or any simple card games (higher value card beats the one with lower value).

The flashcards shouldn't have answers printed on the back if you want to play some of these games with them.

How to print them?

The files are meant to be printed on A4 paper. You can also use thicker paper or laminate the flashcards – this way they will last longer. The back side with answers is not mandatory, it depends on how you are planning to use the flashcards. Each card has a number to allow you to check the answers if necessary.

Depending on the method of calculation, the values can differ slightly from the answers. In any case we recommend that you understand all of these positions well before trying to memorize them.

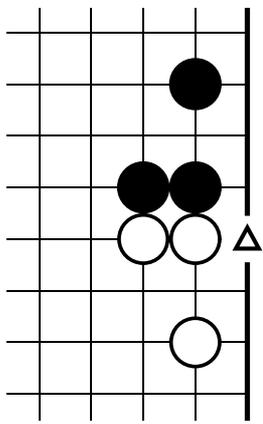

Recommended level: 10 kyu+

Thanks to Stanislaw Frejlak 7d for checking and correcting the flashcards.
